MARKETING PROPOSAL

PREPARED BY PROJEKTS VISION

Digital Awareness Proposal for Activity Maps

A focused first-phase plan to build awareness, test different audiences, create a strong social presence, and validate market interest before scaling into broader growth campaigns.

Project Understanding

Activity Maps is a discovery-focused platform built around local experiences, adventures, and activity exploration. At this stage, the goal is not to aggressively push large-scale ad spend from day one, but to introduce the platform properly, build awareness, and measure how the market responds.

This proposal is structured as an intelligent starting point: build presence, test interest, observe audience behavior, and refine strategy based on actual performance instead of assumptions.

Primary Objective:
Generate early visibility, test different audience segments, and evaluate whether the platform is attracting meaningful attention before moving into a larger paid growth phase.

Phase 1 Strategy

01

Social Presence Setup

Build and structure the platform's social media presence from the ground up so it looks active, trustworthy, and investment-ready when shown to potential clients or partners.

02

Awareness Campaign Launch

Start with awareness-focused campaigns across Meta platforms to introduce the platform, create initial visibility, and begin driving qualified attention.

03

Audience Testing

Test different audience groups, interests, and targeting angles to understand where the strongest response comes from and what type of user shows intent.

04

Data-Led Strategy Refinement

Use the early results to refine messaging, targeting, and platform focus, then shape a more confident growth strategy for the next stage.

What We Will Execute

- Create and organize social media channels with a professional brand presentation.
- Develop an initial awareness approach tailored to the platform concept.
- Launch early-stage Meta ad campaigns focused on visibility and testing.
- Run audience experiments to compare engagement and response across segments.
- Start building followers and basic social traction to support brand credibility.
- Monitor audience behavior and extract insights for future scaling decisions.
- Build the next-step growth plan based on actual market feedback and campaign data.

Google Ads Positioning

Google Ads can absolutely become part of the long-term growth strategy. However, in this initial phase, the smarter direction is to first validate interest, identify responsive audience groups, and establish early awareness through social channels.

Once we have enough response data and a clearer understanding of user behavior, Google Ads can be introduced more strategically for stronger performance and better budget efficiency.

Positioning Summary:
Google Ads is part of the future growth roadmap. The immediate focus is awareness, testing, traction, and market validation.

Testing Approach

Expected Outcome

The purpose of the first phase is to answer the right questions before scaling:

- Is the platform generating meaningful interest from the right audience?
- Which audience categories respond best to the concept?
- Which messaging direction creates the strongest engagement?
- What should the next growth phase look like based on real evidence?

Future Growth Vision

As traction improves, the platform can expand into a broader growth system that includes more structured campaign scaling, stronger content operations, deeper social engagement, onboarding of coordinators, and future user growth campaigns across multiple channels.

This proposal is designed to establish that foundation properly before scaling further.

Prepared with the Projekts Vision brand approach

Clean positioning, structured execution, and a growth plan built around testing first, then scaling with clarity.
